And More Profitably”*

What's New

Ransomware Webinar

Do you know how to keep ransomware out of your computer?
Did you know there is a way you can stop ransomware from encrypting all your files?
Are you confused about ransomware? Unified System has a solution that can stop ransomware in its tracks and protect your valuable data.
To learn more about ransomware and other threats, and how to defend against them, join us for security webinar on the 19th of December 2016, 3 pm to 4.30 pm

By attending, you can qualify for a valuable FREE offer, but you have to attend to learn the details!

Call us for more info

We want to hear from YOU!

Efficient Escrow of California was forced to close its doors and lay off its entire staff when cybercriminals nabbed \$1.5 million from its bank account. The thieves gained access to the escrow company’s bank data using a form of “Trojan horse” malware.

Once the hackers broke in, they wired \$432,215 from the firm’s bank to an account in Moscow. That was followed by two more transfers totaling \$1.1 million, this time to banks in Heilongjiang Province in China, near the Russian border.

The company recovered the first transfer, but not the next two. They were shocked to discover that, unlike with consumer accounts, banks are under no obligation to recoup losses in a cybertheft against a commercial account. That meant a loss of \$1.1 million, in a year when they expected to clear less than half that. Unable to replace the funds, they were shut down by state regulators just three days after reporting the loss.

\$1.5M Cyber-Heist Typifies Growing Threat

Net result? The two brothers who owned the firm lost their nine-person staff and faced mounting attorneys’ fees nearing the total amount of the funds recovered, with no immediate way to return their customers’ money.

Avoid Getting Blindsided

While hacks against the big boys like Target, Home Depot and Sony get more than their share of public attention, cyber-attacks on small and medium-sized companies often go unreported, and rarely make national headlines.

Don’t let this lull you into a false sense of security. The number of crippling attacks against everyday businesses is growing. Cybersecurity company Symantec reports, for example, that 52.4% of “phishing” attacks last December were against SMEs – with a massive spike in November. Here are just a few examples out of thousands that you’ll probably never hear about:

continued on pg2

- Green Ford Sales, a car dealership in Kansas, lost \$23,000 when hackers broke into their network and swiped bank account info. They added nine fake employees to the company payroll in less than 24 hours and paid them a total of \$63,000 before the company caught on. Only some of the transfers could be canceled in time.
- Wright Hotels, a real estate development firm, had \$1 million drained from their bank account after thieves gained access to a company e-mail account. Information gleaned from e-mails allowed the thieves to impersonate the owner and convince the bookkeeper to wire money to an account in China.
- Maine-based PATCO Construction lost \$588,000 in a Trojan horse cyber-heist. They managed to reclaim some of it, but that was offset by interest on thousands of dollars in overdraft loans from their bank.

Why You're A Target - And How To Fight Back!

Increasingly, cyberthieves view SMEs like yours and mine as easy "soft targets." That's because all too often we have:

"Require two people to sign off on every transaction."

1. Bank accounts with thousands of dollars.
2. A false sense of security about not being targeted.
3. Our customers' credit card information, social security numbers and other vital data that hackers can easily sell on the black market.

If you don't want your company to become yet another statistic in today's cyberwar against smaller companies, and your business doesn't currently have a "bullet-proof" security shield, **you MUST take action without delay - or put everything you've worked for at risk. The choice is yours.** Here are three things you can do right away:

1. Remove software that you don't need from any systems linked to your bank account.

2. Make sure everyone with a device in your network NEVER opens an attachment in an unexpected e-mail.
3. Require two people to sign off on every transaction.

Let Us Help

When it comes to defending your data, whether it's bank account information, customer and employee records or proprietary intellectual property or processes, Do NOT take chances. Our experience and track record in keeping our clients' data safe speaks for itself: *"I opened an email from a business associate who I felt was safe; not realizing that his email may have been hijacked. ... I forwarded the email to Tim at Unified System. ... Without Tim's assistance this could have caused exposure of our company and customer data to hackers and other data thieves. ... I am so glad we have Unified System supporting our network!!!!"*

The Ultimate Guide To Choosing The RIGHT VoIP Phone System For Your Small Business, Call Center Or Multi-Location Office

At The Office: Be The Adult In The Room

Shiny New Gadget Of The Month:

There's a reason people refer to the office as a "sandbox," because some folks refuse to act like adults. And, if the level of childish behavior rises to tantrum pitch and the culture becomes toxic, there's no chance for communication or growth. But the office is not a playground, and we're not children. So it's important that we enter into an "adult agreement" when we walk through the doors at work and begin our day.

When I work with companies looking to improve their business, one of the things we start with is our adult agreement. It informs the work we do for the entire day, and hopefully beyond.

Here are three agreements to make sure you're acting your age in the workplace:

Don't shoot each other down.

When a colleague brings an idea to the table – even if you disagree with it – don't shut them down just to be "right." If we want to be collaborative, we've got to consider that those around us have something valuable to offer. If you make it a habit to cut people off or discount what they're saying out of hand, you'll not only guarantee that they won't share their ideas with you again, but you'll likely miss out on insights that could help you and your company.

Own up to mistakes and bring them to the table.

Nobody is perfect – not you, not me, not Bill Gates or Mark Cuban or anyone you might admire in business.

We all make mistakes, and the worst thing we can do is deny that they exist. Instead, own up to your mistakes and let everybody know what they are. We only grow and learn when we're vulnerable with each other. Admitting error is often considered a risk, but it's really an opportunity. Our mistakes let others understand who we are, what risks we're willing to take and what lessons we've had to learn. Share freely to engender trust and understanding among your teammates.

Don't hide problems.

Maybe you want to stay focused on the positive and don't want to highlight "problems." Wrong. You're not a negative person just because you bring problems to light or point out conflicts where they might exist. More likely, you're finally saying what everyone else is thinking and is afraid to say. Or you're bringing something up that's important for everyone to understand in order to improve and move forward. Put problems up for discussion and brainstorm solutions. Hiding problems only makes them grow.

As you seek to master these three steps, remember one more thing: adults don't crush each other just for acting like adults. We've got to support each other in our efforts to be truthful and vulnerable. A team is only as strong as its weakest link, so it's critical that we lift each other up.

When we act like adults – especially in the sandbox – we all win.

Your Desk Is Killing You: Do This Instead

The evidence is piling up that sitting all day is bad for your health.

Though not perfect, Varidesk offers a compelling solution.

On the plus side, The Varidesk sets up right out of the box – no assembly required. With its weight-balancing system, you don't need any hardware to fasten it to your desk. And it features an attractive, sturdy design. You can lean on it and your monitor won't go crashing to the floor. Springs and levers make it easy to raise or lower it to one of 11 preset levels.

The main flaw is that when you raise it, it also moves forward – a problem if you're in a tight space. All in all, though, it's worth looking at, especially if you have a wireless keyboard and mouse – and enough space in your office or cubicle to back up a bit.

Andy Bailey can cut through organizational BS faster than a hot knife through butter, showing organizations the logjams thwarting their success and coaching them past the excuses. After all, as he tells his clients, 100% annual growth is only 2% growth every week. It's not easy. But possible. Andy learned how to build great organizations by building a great business, which he started in college then, grew into an Inc. 500 multi-million dollar national company that he successfully sold and exited. He founded Petra to pass on to other entrepreneurs, business owners and leaders the principles and practices he used to build his successful enterprise, which are rooted in the Rockefeller Habits methodology.

Riddle Me This

What is black and white and red.

Answer to last issue's riddle:
A Kitchen

May the God of hope fill you with all joy and peace as you trust in him, so that you may overflow with hope by the power of the Holy Spirit.

Romans 15:13

“Smart Cities” are adding a whole new layer of complexity to data protection.

Driverless cars, cloud-based services and networks of sensors are driving rapid change... Yet along with great benefits, the smart city revolution adds new threats. For instance, since it relies heavily on interconnectivity, weak links make the whole system vulnerable to cyber-attack. Yet a study by Kaspersky Labs estimates that 57% of smaller companies underinvest in security. With deeper connectivity to these “weak links,” encryption of your own data becomes more critical than ever. Using secured websites (the “https” vs. “http” protocol), for example, not only secures data, it also creates trust among your customers and vendors. Clearly, the smart thing to do is to be ready for smart city challenges.

With Google’s new Daydream VR platform, reality will never be the same.

While it isn’t as pixel-rich as PC-tethered systems like Oculus Rift, Daydream is fully mobile. That means, for instance, you could navigate through a museum and get way more interactive with the exhibits. Google’s “View” headset with clickable touchpad controller is just the first of many to come, as other developers jump into mobile VR. As for apps, Google says there will be at least 50 in the Play Store by the end of December. Daydream has been deeply integrated into the new Android Nougat OS. If Nougat isn’t on your phone yet, be patient – or buy a phone, such as Google’s Pixel, that already has it installed.

Stop wasting your time and costing your company money.

No company is 100% productive 100% of the time. But talk of last night’s game, social media check-ins and long lunch breaks aren’t the only time thieves. Without realizing it, you may be asking your team to do things that frankly hurt the bottom line. For instance, do you hold meetings that take longer than necessary – or don’t need to be held at all? Consider holding meetings only when critical. And when they are, use an agenda to keep everyone on track. Another big time killer is trying to fix a problem via multiple e-mails or chat. Often a simple phone call could resolve the issue with a lot less back and forth.

Want better collaboration at work? Play these tunes.

Research has already shown that teams who listen to music together at work feel more bonded and collaborate better. Yet that begs the question – what type of music do you listen to? It’s a topic likely to end up in wrangling and conflict. However, a recent study at Cornell University offers a scientific answer. And, while metal fans may not be thrilled with it, the results weren’t exactly shocking. The study found that people who listen to happy music were more likely to cooperate, regardless of age, gender or academic major, than those who listen to unhappy music. Interestingly, they found it was not the vibe, but the bouncing beat, that gets teams in sync.
